Quiz #2	Due Oct 9, 2025 at 1:59am 18 pts	⌚ ⋮
Quiz #3	Due Oct 21, 2025 at 12:59am 16 pts	✅ ⋮

Click the **Add Quiz/Survey** button.

Create New Quiz

Choose a Quiz Engine

Canvas now has two quiz engines. Please choose which you'd like to use. [Learn more about the differences.](#)

Select a quiz engine

1 ☒ **New Quizzes/Surveys**

This has more question types, enhanced moderation and accommodation features, and supports creating and managing surveys.

☐ **Classic Quizzes**

2 ☐ Remember my choice for this course

3

Cancel Submit

In the Choose a Quiz Engine screen, select the **New Quizzes** option [1]. To save your quiz engine selection for this course, check the **Remember my choice for this course** checkbox [2].

Then click the **Submit** button [3].

Note: You can [reset your quiz engine choice](#) from the Quiz Options menu at any time.

Edit Quiz Details

The screenshot shows the 'Edit Quiz Details' form with the following elements and numbered callouts:

- 1**: Assignment Name field
- 2**: Graded Quiz option in the Quiz Type dropdown menu
- 3**: Graded Survey or Ungraded Survey options in the Quiz Type dropdown menu
- 4**: Points field (currently set to 0)
- 5**: Assignment Group dropdown menu (currently set to Assignments)
- 6**: Display Grade as dropdown menu (currently set to Points)
- 7**: Do not count this assignment towards the final grade checkbox
- 8**: Do not display in gradebook or the student's grade page checkbox

In the **Assignment Name** field [1], enter the name of your quiz. In the **Quiz Type** drop-down menu, select the **Graded Quiz** option [2]. To create a survey, select either the **Graded Survey** or **Ungraded Survey** option [3].

To enter quiz details, enter the total points possible [4], select the assignment group [5], and choose how the grade is displayed to students [6].

To remove this quiz from final grade calculations, click the **Do not count this assignment towards the final grade** checkbox [6].

The points possible set on the assignment details page is the total points possible for the quiz. Points set per question determine points earned for correct answers. Points earned for correct answers are totaled and divided by the sum of the total question points for the quiz. That percentage is then used to calculate the final score based on the total points set on the assignment details page. For example, if you set the total points on the assignment details page to 50 and create a quiz with 10 questions each worth 1 point, the quiz has a total of 10 points but is worth 50 points when graded. If a student answers 9 questions correctly, their quiz score is 90% (9/10). However, their final score in the Gradebook will be 45/50 (90%).

If your quiz is worth zero points, you can choose to not display the quiz in the Gradebook or student Grades page [7].

Anonymous Grading

Click the **Add Categorization** button.

Add Question Title and Stem

Categorization

1 Question Title 1

2 Question Stem 2

In the **Question Title** field [1], add a question title. Question titles are optional and are not visible to students.

In the **Question Stem** field [2], add a question stem. The question stem contains the question and, if necessary, additional instructions and information. You can [use the Rich Content Editor](#) or the [HTML view](#) to format and add content to your question stem.

Add Categories

The screenshot shows a user interface for adding categories. It features two category cards, 'Category 1' and 'Category 2'. Each card has a 'Description *' field, an 'Answer *' field, and a '+ Answer' link. A red box highlights the '+ Category' link at the bottom left, and a red arrow points to the delete icon on 'Category 2'.

To name a category, type the name in a **Category** field [1]. Each category must have a unique name. To add a new category, click the **Add Category** link [2].

To delete a category, click the **Delete** icon [3].

Add Answers

The screenshot shows a user interface for adding answers. It features two category cards, 'Category 1' and 'Category 2'. Each card has a 'Description *' field, an 'Answer *' field, and a '+ Answer' link. A red box highlights the '+ Answer' link on 'Category 1', and a red arrow points to the delete icon on 'Category 2'.

To add an answer for a category, type the answer name in an **Answer** field below the category where it belongs [1]. To add a new answer, click the **Add Answer** link [2].

To delete an answer, click the **Delete** icon [3].

Add Distractors

The screenshot shows a form with two columns for categories. Each column has a 'Description *' field, an 'Answer *' field, and a '+ Answer' link. Below these is a '+ Category' link. At the bottom, there is an 'Additional Distractors' section with a 'Distractor *' field and a '+ Distractor' link. A red arrow points from the '+ Distractor' link to the 'Distractor *' field. A small black circle with the number '2' is next to the 'Distractor *' field, and a small black circle with the number '1' is next to the '+ Distractor' link.

You can also add distractors to a question. Distractors will appear with the answer choice but do not belong to any of the categories. To add a distractor, click the **Add Distractor** link [1] and type the distractor name in the **Additional Distractor** field [2].

Set Options

Options

1 ☒ Show on-screen calculator

2 ☒ Basic calculator

3 ☐ Scientific calculator

i It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.

☐ Enable One Question at a Time

To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [1].

If you select this option, you can enable a basic calculator [2] or a scientific calculator [3]. The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide). The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used while displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.
- If enabled at both the individual question level and in the [Quiz Settings](#), the on-screen calculator will display within the question instead of at the top of the page.

Select Grading Option

Options

☐ Show on-screen calculator

Grading ? **3**

1 ☒ Exact match

2 ☐ Partial credit

You can select a grading option for the question.

To award points only for an exact match, click the **Exact match** option [3]. This option only awards points if all correct items are categorized correctly and all distractors are left uncategorized.

To award partial credit for the question, click the **Partial credit** option [2]. This option awards points for each correct decision: both placing correct items in the right category and leaving distractors uncategorized. Each decision is worth an equal portion of the total points.

To view the description of each grading option, click the **Tooltip** icon [3].

Align to Outcome

How do I create an Essay question in New Quizzes?

Last Updated: [Sep 2, 2026](#)

When [creating a quiz](#), you can create an Essay question in New Quizzes. In an Essay question, students are required to enter a text response. You can also add word count, word limit, spell-check, and Rich Content Editor options for students' essay responses.

You can also add grading notes to an Essay question. Grading notes will display next to the question as a reference to help you grade student responses.

You can also [duplicate Essay questions](#) to create a new question.

Note: Students can still submit their quiz attempt even if the essay questions minimum and/or maximum word limit is not met.

You can enable various tools for students to use when answering an Essay question. To allow students to use an on-screen calculator, click the **Show on-screen calculator** checkbox [1]. When you select this option, you can choose either a basic or a scientific calculator [2]. The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide). The scientific calculator displays more options for advanced calculations.

The Rich Content Editor is enabled for students by default. To disable the Rich Content Editor, click the **Rich Content Editor** checkbox [3].

To enable spell-check, click the **Spell-check** checkbox [4]. To enable word count tracking, click

the **Show Word Count** checkbox [5].

To set a word limit for the Essay question, click the **Set Word Limit** checkbox [6]. You can set a minimum and maximum word limit for student answers [7].

Notes:

- The on-screen calculator option is intended to be used while displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.
- If enabled at both the individual question level and in the [Quiz Settings](#), the on-screen calculator will display within the question instead of at the top of the page.

Add Grading Notes

The screenshot shows a user interface for adding grading notes. At the top is a tab labeled '> Options'. Below it is a tab labeled '1 Grading Notes'. Underneath the 'Grading Notes' tab is a text field containing the text: '2 Excellent (9-10/10) Excellent work! Your essay demonstrates a thorough understanding of the topic, includes accurate historical evidence, and presents a clear, well-organized argument.'

To add grading notes, click the **Grading Notes** tab [1] and enter your notes in the text field [2].

Note: Grading notes are for internal use only and are never visible to students. They appear beside the question prompt in SpeedGrader and serve as

a grading reference, rubric, or set of instructions for TAs and instructors when evaluating student submissions.

Align to Outcome

To [align the question to an outcome](#), click anywhere in the **Align to Outcomes** section.

Add to Item Bank

To [add the question to an item bank](#), click the **Add to Bank** link.

Note: After a question has been added to an item bank, it can only be edited in the item bank. You can still set unique point values and options in the quiz for an item bank question.

Add Point Value and Feedback

To customize the point value for the question, type the point value in the **Points** field [1] or use the arrows to increase or decrease the point value [2].

To [leave feedback for students](#), click the **Feedback** icon [3].

Save Question

To save the question, click the **Done** button.

How do I create a File Upload question in New Quizzes?

Last Updated: [Sep 2, 2026](#)

When [creating a quiz](#), you can create a File Upload question in New Quizzes. You can limit the number of files and the file extensions that can be uploaded by students.

You can also [duplicate File Upload questions](#) to create a new question.

Notes:

- DocViewer commenting and annotations tools are not available when grading file upload submissions in SpeedGrader.
- Uploaded files submitted in New Quizzes can be downloaded individually in SpeedGrader. New Quizzes does not currently support downloading all uploaded student files in a single bulk download package.

How do I create a Fill in the Blank question in New Quizzes?

Last Updated: [Sep 2, 2026](#)

When [creating a quiz](#), you can create a Fill in the Blank question in New Quizzes. Fill in the Blank questions can have multiple blank spaces and include various answer types.

Each blank space is given a point value calculated by dividing the total points possible by the number of blank spaces. Correct answer choices are awarded this point value and no points are subtracted for incorrect answers. For example, a Fill in the Blank question with four blanks that is worth 1 point would assign a point value of 0.25 to each blank. If a student selects two correct answers and two incorrect answers, they would be awarded a total of 0.50 points for the question.

Add Question Title and Stem

Essay

1

Question Title

2

Question Stem *

In the **Question Title** field [1], add a question title. Question titles are optional and are not visible to students.

In the **Question Stem** field [2], add the question stem. The question stem contains additional instructions and information for your Fill in the Blank question.

Enter a statement and surround a word with backticks to indicate where a user will fill in the answer (e.g., "Roses are `red`, violets are `blue`"). You can [use the Rich Content Editor](#) or the [HTML view](#) to format and add content to your question stem.

Note: To create a backtick using a U.S. keyboard, press the `(backtick) key located below the escape key.

Select Answer Type

In the **Answer Type** menu [1], select the answer type to use for a blank space. Fill in the Blank answer types are Open Entry [2], Dropdown [3], or Word Bank [4].

Select Text Match

The screenshot shows a configuration window for a quiz item. On the left, under 'Answer Type', 'Open Entry' is selected. On the right, the 'Text Match' dropdown menu is open, displaying five options: 'Contains "smallest"', 'Close Enough', 'Exact Match', 'Specify Correct Answers', and 'Regular Expression Match'. The first option is highlighted. Below the menu, the 'Word Bank' is set to 'planet' and 'Word Bank Distractors' is set to 'milky way'.

For Open Entry answer types, you will need to select a Text Match option from the **Text Match** menu. The following options are available:

- **Contains [1]:** Allows for the text to exist anywhere in student responses. However, student answers must match the specified spelling and case. For example, if the blank is "panda", an answer of "It's a panda" will be marked correct, while an answer of "Panda" will be marked incorrect.
- **Close Enough [2]:** Uses Levenshtein Distance to determine if the response is close enough to the correct answer. [Levenshtein Distance](#) is the number of single-character edits needed to change one word to another. You can choose to ignore case.
- **Exact Match [3]:** Requires case and spelling to match exactly.
- **Specify Correct Answers [4]:** Allows for multiple correct answers to be specified. For example, if the response is "panda" and the correct answers specified are "panda" and "Panda", an answer of "panda" or "Panda" will be marked correct, while an answer of "PANDA" will be marked incorrect.

- **Regular Expression Match [5]:** Requires using specialized text strings that describe search patterns. The following step includes a few examples of basic concepts used in regular expressions. Regular expressions are not recommended for beginners and cannot be explained in full in this guide. To begin learning more about regular expressions, [read the Regular Expression Wikipedia entry](#).

Regular Expression Match Examples

You can use the question mark (?) to indicate zero or one occurrences of the preceding element, the asterisk (*) to indicate zero or more occurrences of the preceding element, and the plus sign (+) to indicate one or more occurrences of the preceding element. For example, `colou?r` matches both "color" and "colour"; `ab*c` matches "ac", "abc", "abbc", etc.; `ab+c` matches "abc", "abbc", "abbbc", etc.

You can use a vertical bar (|) to separate alternatives, such as `gray|grey`.

You can use parentheses ("()") to define the scope and precedence of the operators. For example, `gr(a|e)y` matches "gray" and "grey".

Select Possible Choices

For Dropdown answer types, enter the answer choices in the **Possible Choices** fields [1]. Click the button next to the correct answer [2].

To add additional answers, click the **Add Answer** link [3]. To delete an answer, click the **Delete** icon [4].

Note: Answers for the Fill in the Blank dropdown types are always shuffled.

Select Word Bank

For Word Bank answer types, enter the answer choices in the **Correct Answer** fields [1]. Enter words in the **Word Bank Distractors** section [2].

To add additional distractor words, click the **Add Distractor** link [3]. To delete a distractor word, click the **Delete** icon [4].

Set Options

Options

- 1 ☒ Allow word bank choices to be reused
- 2 ☒ Show on-screen calculator
- 3 ☒ Basic calculator
- 4 ☐ Scientific calculator

It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.

To reuse word bank choices, click the **Allow word bank choices to be reused** checkbox [1]. To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [2].

If you select this option, you can enable a basic calculator [3] or a scientific calculator [4]. The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide). The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used while displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.

- If enabled at both the individual question level and in the [Quiz Settings](#), the on-screen calculator will display within the question instead of at the top of the page.

Align to Outcome

To [align the question to an outcome](#), click anywhere in the **Align to Outcomes** section.

Add to Item Bank

If you want to save a question to use in other quizzes, you can add it to an item bank.

To [add a question to an item bank](#), click the **Add to Bank** link.

Note: After a question has been added to an item bank, it can only be edited in the item bank. You can still set unique point values and options in the quiz for an item bank question.

Add Point Value and Feedback

To customize the point value for the question, type the point value in the **Points** field [1] or use the arrows to increase or decrease the point value [2].

To [leave feedback for students](#), click the **Feedback** icon [3].

Save Question

To save the question, click the **Done** button.

Click the **Add Formula** button.

Add Question Title and Stem

Formula

1

Question Title

1

Enter your question, build a formula, and generate a set of possible answer combinations. Students will see the question with a randomly selected set of variables filled in and have to type the correct numerical answer.

Question

You can define variables by typing variable names surrounded by backticks (e.g., "what is 5 plus `x`?")

Question Stem *

2

In the **Question Title** field [1], add a question title. Question titles are optional and are not visible to students.

In the **Question Stem** field [2], add the question stem. The question stem contains the question and, if necessary, additional instructions and

information. You can [use the Rich Content Editor](#) or the [HTML view](#) to format and add content to your question stem.

Identify variables in your question by surrounding variable names with backticks. (e.g., a variable name of x can be identified by typing `x`.)

Add Variable Answers

Answers
Once you have entered your variables above, you should see them listed below. You can specify the range of possible values for each variable below.

1 Variable	Min	Max	Decimals
x	2 0	3 10	0 4

After typing the question with the variable, parameters to define the formula will display [1]. Set the variable answers for the formula. Specify the minimum [2] and maximum [3] values for the variable. Select decimal places by using the increase or decrease arrows [4].

Add Formula Definition

Formula Definition
Next, write the formula or formulas used to compute the correct answer. Use the same variable names listed above. (e.g., "5 + x")

300000*x

Type the formula definition in the formula field. Make sure the formula does not contain any

brackets or equal signs.

Note: The Formula Definition supports the following operators: + (add), - (subtract), * (multiply), / (divide), and ^ (power).

Generate Possible Solutions

Generate Possible Solutions

Finally, build as many variable-solution combinations as you need for your quiz.

Number of solutions

Decimal places

200

0

Margin type

+/- margin of error

Absolute

0

Generate

Display as Scientific Notation

Specify the number of possible solutions you want to generate in the **Number of solutions** field [1].

Then select the number of decimal places required in the **Decimal places** field [2].

In the **Margin type** field, select the absolute or percent margin type [3]. Enter the margin of error for the student's answer in the **+/- margin of error** field [4]. Responses are based on relative error in addition to absolute error. Margins of error can be created as a percentage or as a point value (up to three decimal places).

To display solutions in scientific notation, click the **Display as Scientific Notation** button [5].

To view possible solutions, click the **Generate** button [6].

View Possible Solutions

We were only able to find 11 solutions.

x	Result
7	2,100,000
9	2,700,000
4	1,200,000
0	0
8	2,400,000
3	900,000
5	1,500,000
6	1,800,000
1	300,000
2	600,000
10	3,000,000

Possible solutions are generated based on the number of value combinations.

Set Options

Click the **Add Hot Spot** button.

Add Question Title and Stem

In the **Question Title** field [1], add a question title. Question titles are optional and are not visible to students.

In the **Question Stem** field [2], add the question stem. The question stem contains the question and, if necessary, additional instructions and information. You can [use the Rich Content Editor](#) or the [HTML view](#) to format and add content to your question stem.

Upload Image

To upload an image for the Hot Spot question, drag and drop the image [1]. You can also select a file by clicking the **Browse** link [2] or pressing the **B** key.

Draw Hot Spot

Locate Thomas Jefferson in the image below.

Draw the hot spot's shape    

4

Oval Hot Spot
Clicks within the hot spot will be considered correct

Square Hot Spot
Clicks within the hot spot will be considered correct

Polygon Hot Spot
Clicks within the hot spot will be considered correct

Options

☐ Show on-screen calculator

> Align to Outcomes(0)

> Item Banking

You can use one of three shapes to draw the Hot Spot: square [1], circle [2], and polygon [3]. Additionally, you can define multiple correct Hot Spot areas and select multiple areas for Hot Spot quiz questions [4]. Questions created before this change can also be edited to support multiple Hot Spots.

To delete a Hot Spot and create a new one, click a shape tool or the image. You can also press the **Backspace** or **Delete** key, then draw a new Hot Spot shape.

Notes:

- Auto-grading will assess the students' selections based on the predefined correct answers.
- This feature supports regrading functionality.
- Students' response attempts are limited to the number of Hot Spots you set.

Use Square or Circle Tool

To create a square or circle Hot Spot, click the shape [1] then drag the shape over the Hot Spot [2]. To complete the shape, click your mouse.

Alternatively, you can press the **R** key (square) or **O** key (oval/circle) and use the following Hot Spot Controls:

- To move the Hot Spot, use the **Arrow** keys.
- To resize the Hot Spot, press **Shift** and use the **Arrow** keys.

- To shrink the Hot Spot, press **Shift+Alt** (on a PC keyboard) or **Alt+Option** (on a Mac keyboard) and use the **Arrow** keys.

Use Polygon Tool

To create a polygon Hot Spot, click the polygon shape [1]. Click the image then drag the tool around the image to create each side of the polygon [2]. To end one side of the polygon, click your mouse. To close the Hot Spot area, double-click your mouse at any time.

You can also use the following keyboard shortcuts:

- To draw a Polygon Hot Spot, press the **P** key.
- To add a Polygon Point, press the **Enter** key.
- To close the Polygon Hot Spot, press the **E** key.

To move, resize, or shrink the polygon, use the following Hot Spot controls:

- Move: Use the **Arrow** keys.
- Resize: Press **Shift** and use the **Arrow** keys.
- Shrink: Press **Shift+Alt** (on a PC keyboard) or **Alt+Option** (on a Mac keyboard) and use the **Arrow** keys.

Expand Image

Locate Thomas Jefferson in the image below.

Double click to [close shape](#)    

To expand the image when creating a Hot Spot, click the **Expand** icon or press the **F** key.

Draw the hot spot's shape

1    

2 Done

From the expanded view, you can use any shape to create a Hot Spot [1]. To save the Hot Spot, click the **Done** button [2]. To return to the quiz question, click the **Close** icon [3].

Set Options

Options

- 1 ☒ Show on-screen calculator
- 2 ☒ Basic calculator
- 3 ☐ Scientific calculator

i It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.

☐ Enable One Question at a Time

To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [1].

If you select this option, you can choose either a basic calculator [2] or a scientific calculator [3]. The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide). The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used while displaying one question at a

time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.

- If enabled at both the individual question level and in the Quiz Settings, the on-screen calculator will display within the question instead of at the top of the page.

Align to Outcome

How do I create a Matching question in New Quizzes?

Last Updated: [Sep 2, 2026](#)

When [creating a quiz](#), you can create a Matching question in New Quizzes. In a Matching question, students are required to match answers from a drop-down menu with a list of questions.

You can choose to award partial credit or require an exact match for Matching questions. The partial credit option awards points for each correct answer selected. Exact match awards full credit only if all correct answers are selected and no incorrect answers are selected.

You can also [duplicate Matching questions](#) to create a new question.

1

Question Title 1

2

Question Stem *

In the **Question Title** field [1], add a question title. Question titles are optional and are not visible to students.

In the **Question Stem** field [2], add the question stem. The question stem contains the question and, if necessary, additional instructions and information. You can [use the Rich Content Editor](#) or the [HTML view](#) to format and add content to your question stem.

Add Question/Answer Pairs

Question **1** — Answer **2** **4** 

Question — Answer 

3 + Question/Answer Pair

+ Distractor

Options

☐ Show on-screen calculator

5 ☐ Shuffle questions

To add a question and answer pair, type the question in the **Question** field [1] and its matching answer in the **Answer** field [2]. To add additional Question/Answer pairs, click the **Add Question/Answer Pair** link [3]. To delete a Question/Answer pair, click the **Delete** icon [4].

To shuffle questions, click the **Shuffle Questions** checkbox [5].

Add Additional Distractors

Additional Distractors

Type an answer **2** 

1 + Distractor **3**

You can also add additional distractors to the question. Distractors will appear in the drop-down menu with the answers added in the Answer fields. To add a distractor, click the **Add**

Distractor button [1] and type the distractor name in the **Additional Distractors** field [2].

To delete a distractor, click the **Delete** icon [3].

Enable On-Screen Calculator

The screenshot shows a user interface for enabling an on-screen calculator. At the top is a dropdown menu labeled 'Options'. Below it are three numbered options: 1. 'Show on-screen calculator' with a checked checkbox, 2. 'Basic calculator' with a radio button, and 3. 'Scientific calculator' with a radio button. Below these options is a blue information box with a white 'i' icon. The text inside the box reads: 'It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.' At the bottom of the box is a button with a close icon and the text 'Enable One Question at a Time'.

To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [1].

If you select this option, you can choose either a basic calculator [2] or a scientific calculator [3].

The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide).

The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used while displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.

- If enabled at both the individual question level and in the Quiz Settings, the on-screen calculator will display within the question instead of at the top of the page.

☐

Shuffle questions

Grading ?

1

☒

Partial credit

2

☐

Exact match

You can select a grading option for the question. To award partial credit for the question, click the **Partial credit** option [1]. The Partial credit option awards points for each correct answer selected.

Partial credit is calculated by dividing the total points possible by the number of correct answers for the question. This amount is awarded for each correct answer selected. No points are awarded for answers that are not selected. Zero is the lowest possible score. For example, if a question is worth 4 points and there are 2 correct answers, Canvas divides 4 by 2 and awards 2 points for correct answers selected.

To award points only for an exact match, click the **Exact Match** option [2]. The Exact Match option

only awards points if all correct answers are selected and no incorrect answers are selected.

Align to Outcome

To [align the question to an outcome](#), click anywhere in the **Align to Outcomes** section.

Add to Item Bank

If you want to save a question to use in other quizzes, you can add it to an item bank.

To [add the question to an item bank](#), click the **Add to Bank** link.

Note: After a question has been added to an item bank, it can only be edited in the item bank. You can still set unique point values and options in the quiz for an item bank question.

Add Point Value and Feedback

To customize the point value for the question, type the point value in the **Points** field [1] or use the arrows to increase or decrease the point value [2].

To [leave feedback for students](#), click the **Feedback** icon [3].

Save Question

To save the question, click the **Done** button.

How do I create a Multiple Answer question in New Quizzes?

Last Updated: [Sep 2, 2026](#)

When [creating a quiz](#), you can create a Multiple Answer question in New Quizzes. Multiple Answer questions are formatted like [Multiple Choice questions](#), but there are multiple correct answers.

You can choose to award partial credit with penalty or require an exact match for Multiple Answer questions. The partial credit with penalty option awards points for each correct answer selected and deducts points for each incorrect answer selected. Exact match awards full credit only if all correct answers are selected and no incorrect answers are selected.

Partial credit is calculated by dividing the total points possible by the number of correct answers for the question. This amount is awarded for each correct answer selected

+ Answer

To add answers to a Multiple Choice question, type the answers in the **Answer** fields [1]. To select the correct answer, click the button next to that answer [2].

To add an additional answer choice, click the **Add Answer** link [3]. To delete an answer, click the **Delete** icon [4].

Add Answer Choice Feedback

In what year did the Battle of Yorktown take place?

1781

Answer Feedback

That is correct! The Battle of Yorktown took place in September and October of 1781.

Done

1776

To provide students with feedback for a specific answer choice, click the **Feedback** icon [1]. Then enter the feedback in the Rich Content Editor [2].

To save your feedback, click the **Done** button [3]. After feedback has been added to an answer, the Feedback icon will display as shaded [4].

Enable On-Screen Calculator

The screenshot shows a settings menu titled 'Options'. It contains three numbered items: 1. 'Show on-screen calculator' with a checked checkbox; 2. 'Basic calculator' with a selected radio button; 3. 'Scientific calculator' with an unselected radio button. Below these is a blue information box with a white 'i' icon. The text inside the box states: 'It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.' At the bottom of the box is a toggle switch labeled 'Enable One Question at a Time', which is currently turned off.

To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [1].

If you select this option, you can choose either a basic calculator [2] or a scientific calculator [3]. The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide). The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used when displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.

- If enabled at both the individual question level and in the [Quiz Settings](#), the on-screen calculator will display within the question instead of at the top of the page.

Vary Points by Answer

The screenshot shows a quiz question: "In what year did the Battle of Yorktown take place?". There are three radio button options: 1781, 1776, and 1782. Each option has a corresponding points field. The points field for 1781 is set to 2, for 1776 to 0, and for 1782 to 1. Below the options, there is a section for "Options" with checkboxes for "Show on-screen calculator", "Vary points by answer" (which is checked), and "Shuffle Choices". There are also expandable sections for "Align to Outcomes (0)" and "Item Banking". At the bottom, there is a "Points" field set to 2, with "Cancel" and "Done" buttons.

To vary points based on student responses, click the **Vary points by answer** checkbox [1].

With this option selected, you can set specific point totals for each option by typing the point value in the **Points** field [2] or using the arrows to increase or decrease the point value [3].

When this option is enabled, the total points will display the highest point value possible for an answer [4].

How do I create a Numeric question in New Quizzes?

Last Updated: [Sep 2, 2026](#)

When [creating a quiz](#), you can create a Numeric question in New Quizzes. Numeric questions will accept answers from students that contain numbers, text, and/or symbols. However, instructors can only use numeric entries for accepted answers. Student answers in a non-numeric format will not be graded automatically.

You can also [duplicate Numeric questions](#) to create a new question.

Note: Admins can set the thousand and decimal separators for number formatting in New Quizzes for your institution.

Click the **Add Numeric** button.

Add Question Title and Stem

Essay

1

Question Title

2

Question Stem *

In the **Question Title** field [1], add a question title. Question titles are optional and are not visible to students.

In the **Question Stem** field [2], add the question stem. The question stem contains the question and, if necessary, additional instructions and information. You can [use the Rich Content Editor](#) or the [HTML view](#) to format and add content to your question stem.

Select Requirement

Requirement ① Answer

Exact response

Exact response

Margin of error

Within a range

Precise response

Requirement ①

Exact response

2 + Possible Answer

To select a requirement for the answer, select an option from the **Requirement** drop-down menu [1]. You can select Exact Response, Margin of Error, Within a Range, or Precise Response.

To add additional answers, click the **Add Possible Answer** link [2].

Select Exact Response

Requirement ① Answer

Exact response 1

2

To add an exact response answer, select the **Exact Response** option [1]. Enter an answer by typing the answer in the **Answer** field [2] or using the arrows [3]. Exact response answers can be added in scientific notation (accepted format: 1.234×10^5).

Student responses will be marked correct if they match the answer exactly.

Note: The Range fields only accept numbers, periods, commas, asterisks, and carets.

Select Margin of Error

Requirement	Answer	+/- margin	Type
Margin of error 1	2	3	Percent 4

To add a margin of error answer, select the **Margin of Error** option [1]. Enter the answer in the **Answer** field [2]. Then add the margin in the **Margin** field [3] and select the margin type in the **Margin Type** drop-down menu [4]. You can select percentage or absolute margin type. Margin of error fields do not accept entries written in scientific notation.

Student answers will be marked correct if they fall within the margin above or below the answer.

Note: The Answer and Margin fields only accept numbers, periods, and commas.

Select Within a Range

Requirement	Range start	Range end
Within a range 1	2	3

To add an answer that must fall within a specific range, select the **Within a Range** option [1]. Then select the range start [2] and the range end for the answer [3]. Range inputs can be entered in scientific notation (accepted format: 1.234×10^5).

Student responses will be marked correct if they are greater than or equal to the range start and less than or equal to the range end.

Note: The Range fields only accept numbers, periods, commas, asterisks, and carets.

Select Precise Response

Requirement	Answer	Precision	Type
Precise response	2	3	Significant digits

To add an answer with a precise requirement, select the **Precise Response** option [1]. Then select the answer [2], precision value [3], and precision type [4]. The options for precision type are significant digits and decimal places. Precise response fields do not accept entries written in scientific notation.

Student responses will be marked as correct if they match the answer to the given number of significant digits or decimal places.

Note: The Answer field only accepts numbers, periods, and commas. The Precision field only accepts whole numbers greater than 1.

Enable On-Screen Calculator

Options

1 ☒ Show on-screen calculator

2 ☒ Basic calculator

3 ☐ Scientific calculator

i It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.

☐ Enable One Question at a Time

To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [1].

If you select this option, you can choose either a basic calculator [2] or a scientific calculator [3]. The basic calculator displays numbers and basic math functions (addition, subtraction, multiplication, division). The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used when displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.
- If enabled at both the individual question level and in the [Quiz Settings](#), the on-screen calculator will display within the question instead of at the top of the page.

Align to Outcome

To [align the question to an outcome](#), click anywhere in the **Align to Outcomes** section.

Add to Item Bank

To [add the question to an item bank](#), click the **Add to Bank** link.

Note: After a question has been added to an item bank, it can only be edited in the item bank. You can still set unique point values and options in the quiz for an item bank question.

Add Point Value and Feedback

To customize the point value for the question, type the point value in the **Points** field [1] or use the arrows to increase or decrease the point value [2].

To [leave feedback for students](#), click the **Feedback** icon [3].

Save Question

To save the question, click the **Done** button.

How do I create an Ordering question in New Quizzes?

Last Updated: [Sep 10, 2026](#)

When [creating a quiz](#), you can create an Ordering question in New Quizzes. In an Ordering question, students must place answers in a specific order. The answer choices are automatically shuffled in Preview and Student view to prevent exposing the correct sequence to students. You can add top and bottom labels to the list to help students know in which order they should place their responses.

When Ordering questions are graded, students must order all items correctly to earn full points. There is no option to assign partial credit.

You can also [duplicate Ordering questions](#) to create a new question.

- 2 Type an answer
- 3 Type an answer
- 4 Type an answer

+ Answer

Latest

To add answers to the Ordering question, type the answers in the **Answer** fields [1]. To add additional answers, click the **Add Answer** link [2].

To delete an answer, click the **Delete** icon [3].

Move Answers

- 1 Georgia
- 2 Delaware
- 3 Rhode Island

You can move an answer in an Ordering question by dragging and dropping or using the Move icon.

To drag and drop an answer, hover over the answer until the Move cursor appears [1]. Then drag and drop the answer to its new location [2].

- 1 Georgia
- 2 Delaware
- 3 Rhode Island

Move Up

Move Down

To move an answer using the Move icon, click the **Move** icon [1] and select the **Move Up** or **Move Down** option [2].

Enable On-Screen Calculator

The screenshot shows a settings menu titled 'Options'. It contains three numbered items: 1. 'Show on-screen calculator' with a checked checkbox; 2. 'Basic calculator' with a selected radio button; 3. 'Scientific calculator' with an unselected radio button. Below these is a blue information box with a white 'i' icon. The text inside the box states: 'It is highly recommended that you enable One Question at a Time mode in order to prevent students from using the calculator on questions it was not intended for. Changes to this setting will take effect immediately.' At the bottom of the box is a toggle switch labeled 'Enable One Question at a Time', which is currently turned off.

To allow students to use an on-screen calculator for this question, click the **Show on-screen calculator** checkbox [1].

If you select this option, you can choose either a basic calculator [2] or a scientific calculator [3].

The basic calculator displays numbers and basic math functions (add, subtract, multiply, divide).

The scientific calculator displays more options for advanced calculations.

Notes:

- The on-screen calculator option is intended to be used while displaying one question at a time. If the quiz does not display one question at a time, students may be able to use the calculator for all questions.

- If enabled at both the individual question level and in the [Quiz Settings](#), the on-screen calculator will display within the question instead of at the top of the page.
